

RENTAL MARKET REPORT

Edmonton CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Fall 2011

Highlights

- The apartment vacancy rate across the Edmonton Census Metropolitan Area (CMA) decreased to 3.3 per cent in October 2011 from 4.2 per cent in October 2010.
- The average monthly rent for a two-bedroom apartment in new and existing structures in the Edmonton CMA was \$1,034 this October, up from \$1,015 in October 2010.
- In rental structures common to both surveys, the average rent for a two-bedroom apartment unit increased by 0.9 per cent year-over-year.
- The average vacancy rate in row (townhouse) rental units decreased to three per cent this fall from 3.5 per cent in October 2010.

Edmonton Rental Market Survey

Apartment Vacancies Continue Downward

Following a modest year-over-year reduction last fall, the apartment vacancy rate¹ across the Edmonton Census Metropolitan Area (CMA) decreased to 3.3 per cent in October from 4.2 per cent in October 2010. Increased net migration into Alberta and stronger job creation in Alberta's Capital region has contributed to the reductions in vacant rental apartments.

With apartment vacancies trending downward across Edmonton, some property managers and owners have been able to increase rents. In October 2011, an average two-bedroom apartment rented for \$1,034, representing a \$19 increase from October 2010. Between October 2009 and 2010, two-bedroom rents remained stable at \$1,015 per month.

On a same-sample basis², the average rent for a two-bedroom apartment increased by 0.9 per cent from October 2010 to October 2011. In last year's survey, the year-over-year per cent change in same-sample rents compared to 2009 was not statistically different than zero.

Survey Results

CMHC's October 2011 Rental Market Survey (RMS) of privately-owned rental structures in Greater

Figure 2

Source: CMHC

Edmonton found a vacancy rate of 3.3 per cent within a total universe of 57,941 rental apartments.

This compares with a vacancy rate of 4.2 per cent of 58,557 apartment units in the October 2010 survey. The universe of purpose-built rental apartments decreased by 616 units or 1.1 per cent between the two October surveys. This follows a decline of 483 units or 0.8 per cent between the October 2009 and 2010 surveys.

The change in the number of units in the universe is impacted by new unit completions and structures that are added or removed due to renovations, demolitions, fire damage, or condominium conversions. For example, there were 400 rental apartments permanently removed from the CMHC universe between October 2010 and 2011 due to condominium conversion. Other

buildings removed from the survey were either vacant and for sale, demolished, boarded up, or converted to other uses. During the period October 2010 to September 2011, there were 83 rental apartment unit completions throughout the Edmonton CMA. Since the number of units removed from the universe exceeded the number of additions, Edmonton's apartment rental universe moved lower in the past year.

Table 1.1.1 shows vacancy rates by survey zone and unit type. Following a 0.3 percentage point decrease in the previous October survey, the apartment vacancy rate decreased by 0.9 percentage points from October 2010 to October 2011 to 3.3 per cent. Bachelor suites reported the lowest vacancy rate at 2.7 per cent. Vacancies among all other types were very close to the overall average for all apartments.

¹ Based on privately-initiated rental apartment structures of three or more units.

² When comparing year-over-year average rents, the age of the building needs to be taken into consideration because rents in newly-built structures tend to be higher than in existing buildings. By comparing rents for units that are common to both 2010 and 2011 October Rental Market Surveys, we can get a better indication of actual rent increases paid by most tenants.

Figure 3

Source: CMHC

The area with the lowest vacancy rate this fall was St. Albert, at 0.5 per cent. Other relatively tight markets included the South West and Leduc, both at 1.2 per cent. The University and Millwoods zones were also showing a low vacancy rate of 1.3 per cent. Similar to the 2010 October survey, the highest vacancy rate was found in Fort Saskatchewan at 10.7 per cent compared with 10.2 per cent a year prior.

A breakdown of apartment vacancy rates by rent range is provided in Table 1.4 and illustrated in Figure 3. Vacancies in October 2011 were highest, at 5.6 per cent, for units renting between \$600 and \$749 per month. Units renting for less than \$600 displayed vacancy rates in 2011 of 2.0 per cent compared with 4.2 per cent a year prior. Units priced over \$1,200 per month reported a vacancy rate of 2.2 per cent this year compared with a rate of 2.8 per cent in 2010.

When comparing vacancy rates by size of structure, in general larger buildings had fewer vacancies than

smaller structures. Structures with 100+ units reported an average vacancy rate this fall of 1.6 per cent compared with two per cent a year prior. Buildings with fewer than 20 units displayed vacancy rates of over four per cent in October 2011 compared to over five per cent in 2010.

Availability Rates Trending Lower

The availability rate for apartments in Greater Edmonton continues to decrease. Following a 0.3 percentage point decline in the previous October survey, the availability rate declined to 4.3 per cent from 5.3 per cent a year prior. Similar to the 2010 survey, the availability rate was highest in Fort Saskatchewan at 12.2 per cent. The lowest availability rate, at two per cent, was located in St. Albert. A rental unit is considered available if the unit is vacant, or the existing tenant has given or received formal notice to move and a new tenant has not signed a lease. As the definition of availability includes vacancy, the availability rate will always be equal to or greater than the vacancy rate.

Apartment Rents Increase

With vacancy rates declining across Metro Edmonton, rent levels have edged upward. The average rent for all apartment units rose \$17 per month to \$934 from an average value

Figure 4

Source: CMHC

of \$917 recorded in October 2010. This follows an average year-over-year increase of one dollar per month in the previous October survey. On a same-sample basis, rents in existing units increased by one per cent between October 2010 and October 2011. This compares with a 0.4 per cent increase for all units in the previous October survey.

The average one-bedroom apartment rent increased from \$843 in October 2010 to \$857 in 2011's survey. On a same-sample basis, one-bedroom rents this year increased by 0.8 per cent compared with a 0.7 per cent rise in one-bedroom rents in existing units between October 2009 and 2010. A typical two-bedroom apartment rented for \$1,034 in October 2011, up from \$1,015 a year prior. When looking at units common to both surveys, two-bedroom rents increased by 0.9 per cent in the past year. In the previous survey, the change in two-bedroom rents was not statistically different from zero.

Table 1.1.2 shows average apartment rents by bedroom type and survey zone. Similar to last year's survey, the district showing the highest overall average rent was Strathcona County at \$1,067 per month. The lowest rent levels in our survey were recorded in North Central and Hudson Bay Reserve, at \$779 and \$794, respectively. These older inner-city areas also had the lowest rent levels in 2010 and are typically the least expensive places to rent in Edmonton.

Fewer Incentives Available

With vacancy rates moving lower across the Edmonton region, fewer landlords are offering incentives to lure new tenants and reduce turnovers. Typical incentives range from a month's free rent or two-year

Figure 5

Source: CMHC

leases (with locked in rents) to extra appliances, free cable TV, parking or high-speed internet. The proportion of rental apartment structures offering incentives decreased from 25 per cent last October to 10 per cent this October. This represents the lowest level since October 2008, when slightly more than three per cent of structures surveyed offered incentives. With vacancies expected to remain on the downward trend in 2012, the proportion of landlords offering incentives should also decrease.

Row Vacancy Rates Decrease

CMHC's October 2011 survey of privately-owned rental townhouse structures in Greater Edmonton found a vacancy rate of three per cent within a total universe of 7,932 rental row units. This compares with a vacancy rate of 3.5 per cent of 8,073 row units a year prior. The universe of purpose-built rental townhouses decreased by 141 units or 1.7 per cent between the two October surveys. This compares with a decrease of 93 units or 1.1 per cent

between the October 2009 and 2010 surveys. During the period October 2010 to September 2011, there were 54 row rental unit completions across the Capital region. Between the October surveys, however, 133 units were permanently removed from the universe due to condominium conversion.

At 17.3 per cent, the highest row vacancies across the Edmonton CMA were found in Fort Saskatchewan. In October 2010, row vacancies in Other Outlying Areas were also the highest at 15.8 per cent. The availability rate within Greater Edmonton's rental townhouse units decreased to four per cent on October 2011 compared with 4.6 per cent one year earlier.

Row Rents Relatively Stable

The average rent for all row units was \$1,135 per month this October 2010 compared with \$1,127 a year prior. This follows an increase of \$46 per month between the 2009 and 2010 October surveys. The majority of townhouses in the region contain

Figure 6

Source: CMHC

two-or-more bedrooms. Two-bedroom units rented for \$1,073 this year compared with \$1,065 last October. Units with three-or-more bedrooms rented for \$1,178 this fall, up \$13 from this time last year.

On a same-sample basis, townhouse rents rose year-over-year by 1.1 per cent. This follows a five per cent increase reported in the 2010 survey. The highest townhouse rents, at \$1,263 per month, were found in Castledowns. The lowest row unit rents were found in Other Outlying Areas at \$844 per month.

Rental Market Outlook

Elevated world oil prices have improved cash flow within the energy sector and the resulting capital spending will help maintain strong economic growth in the Alberta Capital region during the coming year. Apartment vacancy rates across Greater Edmonton decreased in 2011 thanks to improved demand

associated with the growing economy and further reductions are expected in the coming year as the economy continues to expand.

While rental completions should increase next year due to an uptick in starts in 2011, the new supply will not keep pace with the expected rise in demand. Improving employment, particularly among the younger-age groups, will encourage more newcomers to the region. Meanwhile, inventories in both the new and existing condominium homeowner market have remained elevated this year but are expected to decrease in 2012.

With apartment vacancies trending downward, rental rates will continue to rise in the months ahead. A typical two-bedroom unit will rent for close to \$1,060 by the fall of 2012, representing a \$26 per month average increase over the current year. As turnovers decrease and occupancy levels improve, we also look for fewer incentives on offer to prospective tenants in 2012.

Secondary Rental Market Survey

CMHC's Secondary Rental Market Survey collects information on rented condominium apartments, single-detached houses, double (semi-detached) houses, freehold row/town houses, duplex apartments, accessory apartments, and apartments which are part of a commercial or other type of structure containing one or two dwelling units.

Secondary Rental Market Survey: Condominium Apartments

CMHC's survey found a total condominium universe of 41,183 units this October compared with 39,413 units last fall. The number of condominium apartments identified as rental totalled 11,733 units, not significantly different from the 11,312 rental condominiums tallied last year. This follows a 34 per cent increase in condominium rental units in the previous survey. The proportion of condominium units identified as investor-owned and rented rather than owner-occupied remained stable at 28.5 per cent of the total condominium universe, compared with 28.7 per cent in 2010. The vacancy rate in rental condominium apartments across the Edmonton CMA was 3.7 per cent in October 2011 compared to a vacancy rate of 5.2 per cent in October 2010.

The average monthly rent for a typical two-bedroom condominium apartment unit in Greater Edmonton in October 2011 was \$1,164 compared to \$1,050 in the

Figure 7

Source: CMHC

October 2010 survey. The change in condominium rental rates can be credited to increasing demand for condominium rentals and rental apartments as well as rising rents in the purpose-built rental stock. A comparison of monthly rental rates between rental condominiums and rental apartments in the October survey is provided in Table 4.1.2. As was found in previous surveys, rents in condominium apartments are typically higher than in purpose-built rental units. In general, condominium units would be expected to rent for more than a similar sized rental unit because new condos are designed and marketed as a premium product.

As such, condominium apartments are typically better appointed than rentals, with additional features such as in-suite washer and dryers, walk-in closets and en-suite bathrooms, as well as underground parking.

Secondary Rental Market Survey: Other Dwelling Types

The number of households renting in Edmonton's other secondary market in October 2011 was estimated at 47,756, compared to an estimated

47,073 in October 2010. The average rent in the other secondary market this year was \$1,166 compared with \$1,106 in October of previous year.

The 2011 secondary survey of other dwelling types reported 16,162 households renting single-detached units and paying an average rent of \$1,230 per month. This compares with an average single-detached rent of \$1,199 in October 2010. The October 2011 survey found 25,588 households renting either a semi-detached, row or duplex unit. These households paid an average rent of \$1,143 compared with \$1,056 a year prior. The 2011 survey reported an average rent for other unit types (primarily accessory suites) of \$1,091.

Readers are reminded to use caution when comparing data year-to-year in the Secondary Rental Market Survey since the type of dwellings surveyed and their characteristics can vary from one year to the next. Owners of these types of dwellings can, for example, shift them in and out of the rental market. Unlike structures in the RMS, which are purpose-built for rental tenure, structures in the secondary rental market can be a rental structure one year and an owner-occupied structure the next.

Rental Affordability Indicator

CMHC's rental affordability indicator³ shows that affordability in Edmonton's rental market increased in the past year. The rental affordability indicator in Edmonton was 121 for 2011 compared with 117 in 2010. Affordability increased because renter income grew at a faster rate in the past year than the increase in the cost of renting a median-priced two-bedroom apartment. The estimated median income of renter households increased by 4.2 per cent from 2010 to 2011, while the median rent of a two-bedroom apartment increased one per cent during the same period.

National Vacancy Rate Decreased in October 2011

The average rental apartment vacancy rate in Canada's 35 major centres⁴ decreased to 2.2 per cent in October 2011 from 2.6 in October 2010. Immigration and increased employment in the under 25 years age group have been factors supporting demand for rental units.

The major centres with the lowest vacancy rates in October 2011 were Regina (0.6 per cent), Winnipeg, Kingston and Guelph (1.1 per cent), and St. John's (1.3 per cent). The major centres with the highest vacancy rates were Windsor (8.1 per cent), Abbotsford (6.7 per cent), Saint John (5.9 per cent), Sherbrooke (4.7 per cent) and Moncton (4.3 per cent).

The Canadian average two-bedroom rent was up from \$860 in October 2010 to \$883 in October 2011. With respect to the CMAs, the highest average monthly rents for two-bedroom apartments in new and existing structures in Canada's major centres were in Vancouver (\$1,237), Toronto (\$1,149), Ottawa (\$1,086), Calgary (\$1,084), Victoria (\$1,045), Edmonton (\$1,034) and Barrie (\$1,001). The lowest average monthly

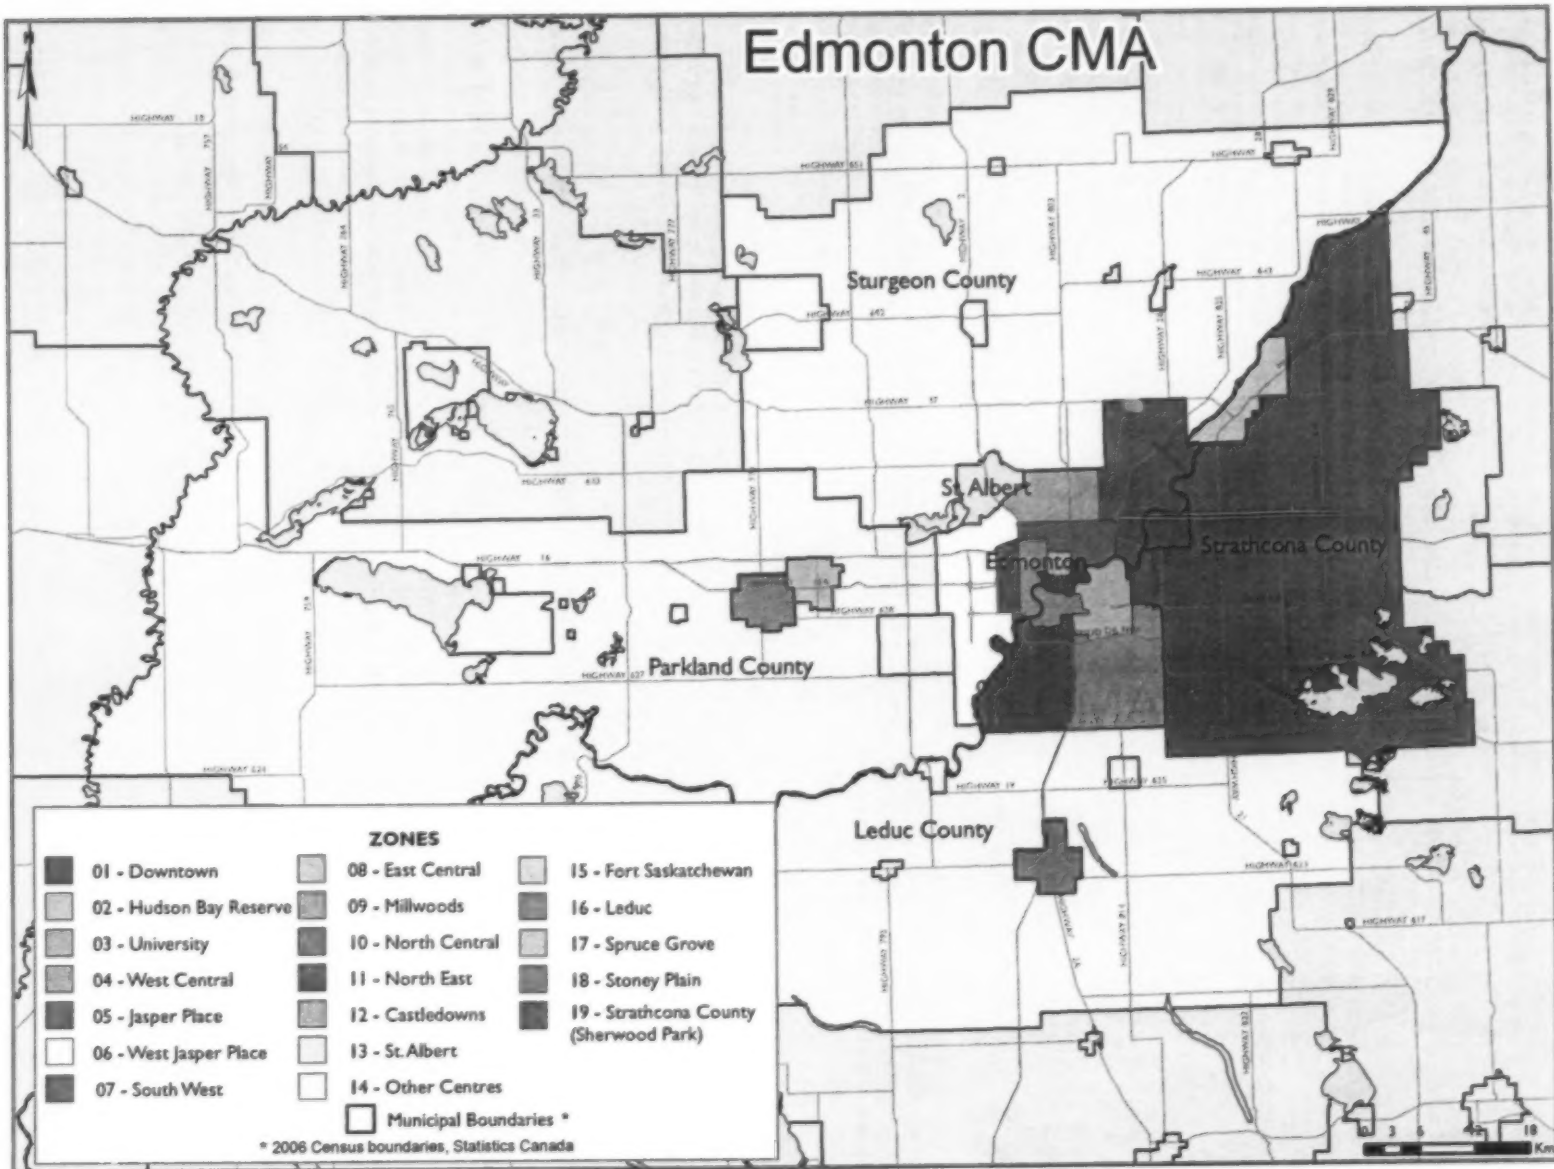

rents for two-bedroom apartments were in Trois-Rivières (\$547), Saguenay (\$557) and Sherbrooke (\$577).

Overall, the average rent for two-bedroom apartments in existing structures across Canada's 35 major centres increased 2.2 per cent between October 2010 and October 2011, a similar pace of rent increase to what was observed between October 2009 and October 2010 (2.4 per cent) and roughly in line with inflation (2.9 per cent).

CMHC's October 2011 Rental Market Survey also covers condominium apartments offered for rent in Victoria, Vancouver, Calgary, Edmonton, Regina, Saskatoon, Winnipeg, Toronto, Ottawa, Montréal and Québec. Vacancy rates for rental condominium apartments were 2.0 per cent or below in 7 of the 11 centres surveyed. Rental condominium vacancy rates were the lowest in Saskatoon (0.4 per cent), Regina (0.6 per cent) and Vancouver (0.9 per cent). The highest vacancy rates for rental condominium apartments occurred in Calgary (5.7 per cent), Edmonton (3.7 per cent) and Montréal (2.8 per cent).

⁴ Major centres are based on Statistics Canada Census Metropolitan Areas (CMAs) with the exception of the Ottawa-Gatineau CMA which is treated as two centres for Rental Market Survey purposes and Charlottetown which is a Census Agglomeration (CA).

¹The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b - Very good, c - Good, d - Fair (Use with Caution)

** Data suppressed to protect confidentiality or data not statistically reliable.

++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

¹The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b - Very good, c - Good, d - Fair (Use with Caution)

** Data suppressed to protect confidentiality or data not statistically reliable.

++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

¹The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b - Very good, c - Good, d - Fair (Use with Caution)

** Data suppressed to protect confidentiality or data not statistically reliable.

++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

TECHNICAL NOTE:

Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):

Percentage Change of Average Rents (New and Existing Structures): The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in the previous year vs. \$550 in current survey represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

Percentage Change of Average Rents from Fixed Sample (Existing Structures Only): This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey (RMS)** every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent, available and vacant unit data from sampled structures. Most RMS data contained in this publication refer to privately initiated apartment structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. In October 2006, CMHC introduced a new measure for the change in rent that is calculated based on existing structures only. This estimate is based on structures that were common to the survey sample the previous year and the current year of the Rental Market Survey. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in the Rental Market Report – Canada Highlights, Provincial Highlights, and the local Rental Market Reports. The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

METHODOLOGY FOR SECONDARY RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts a survey of the **Secondary Rental Market (SRMS)** in September and October to estimate the relative strengths in the secondary rental market which is defined as those dwellings not covered by the regular RMS. CMHC has identified the following dwelling components to be included in SRMS:

- Rented single-detached houses.
- Rented double (semi-detached) houses (i.e., Two units of approximate equal size and under one roof that are situated either side-by-side or front-to-back).
- Rented freehold row/town homes.
- Rented duplex apartments (i.e., one-above-other).
- Rented accessory apartments (separate dwelling units that are located within the structure of another dwelling type).
- Rented condominiums (can be any dwelling type but are primarily apartments).
- One or two apartments which are part of a commercial or other type of structure.

The SRMS has three components which are conducted in selected CMAs:

- A Household Rent Survey of all households to collect information about rents.
- A Condominium Apartment Rent Survey of households living in condominium apartments to collect information about rents.
- A Condominium Apartment Vacancy Survey of condominium apartment owners to collect vacancy information.

All three surveys are conducted by telephone interviews. For the condominium apartment vacancy survey, information is obtained from the owner, manager, or building superintendent and can be supplemented by site visits if no telephone contact is made. For the other two surveys, information is collected from an adult living in the household. All surveys are conducted in September and October, and the results reflect market conditions at that time.

CMHC publishes the number of units rented and vacancy rates for the condominium vacancy survey. For the condominium rent and household rent surveys, the average rent is published. A letter code representing the statistical reliability (i.e., the coefficient of variation (CV)) for each estimate is provided to indicate the data reliability. Rented condominium apartments were surveyed in the following CMAs: Vancouver, Victoria, Calgary, Edmonton, Regina, Saskatoon, Winnipeg, Toronto, Ottawa, Montréal and Québec (NOTE: condo rent data was not collected for Regina and Saskatoon). Other secondary rental market units were surveyed in Abbotsford, Barrie, Calgary, Edmonton, Halifax, Montréal, Ottawa, Québec, St. John's, Toronto, Winnipeg, Regina, Saskatoon, Kelowna, Vancouver and Victoria.

DEFINITIONS

Availability: A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

Rent: The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

Rental Apartment Structure: Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

Rental Row (Townhouse) Structure: Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

Vacancy: A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

All data presented in this publication is based on Statistics Canada's 2001 and 2006 Census area definitions.

Acknowledgement

The Rental Market Survey and the Secondary Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, building superintendents and household members throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

Rental Affordability Indicator

Canada Mortgage and Housing Corporation has developed a rental affordability indicator to gauge how affordable a rental market is for those households which rent within that market. A centre's median income is divided by the level of income required for a household to rent a median priced two-bedroom apartment using 30 per cent of income. The result is then multiplied by 100. A value above 100 indicates that less than 30 per cent of the median income is required to rent a two-bedroom apartment, conversely, a value below 100 indicates that more than 30 per cent of the median income is required to rent the same unit. In general, as the indicator increases, the market becomes more affordable; as the indicator declines, the market becomes less affordable. For years for which the median income is not available, CMHC has developed forecasts.

Median renter household income estimates used in the calculation of the rental affordability indicator are based on results of Statistics Canada's Survey of Labour and Income Dynamics. Results for this survey are available from 1994 to 2009. CMHC has developed forecasts of median renter household income for 2010 and 2011. It should be noted that nominal values for both median rent and median incomes have been used to calculate the rental affordability indicator.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
